Pins 1,7, and 8 are not used on the LM386 (gain of 20).

BT1 and BT2 are standard 9V batteries.

The antenna is a standard telescoping antenna.

U1A must be a operational amplifier with a J-FET input.

100nF = .1uF (Easy to lose the "point" on the schematic)

Notes:

U1B forms a 12dB/octave high pass filter at 600Hz. R5 and R9 values are needed for R6, R2 and C5, C4 to be equal. 1/(2*pi*R*C)=-3dB frequency.
